SNAP ACTING RELAY

Model 24

FAIRCHILD
INDUSTRIAL PRODUCTS COMPANY

GENERAL INFORMATION

MODEL 24 SNAP ACTING RELAY

APPLICATIONS

The Model 24 Snap Acting Relay is a highly accurate differential relay with snap-action switching. The output of the unit will go to supply pressure when the signal is equal to or greater than the set point. The signal pressure must fall below the set point to return the output to zero.

FEATURES

Performance

- Near Zero Throttling Band and Pilot Staging result in true snap-action.

Functional

- 14 SCFM Flow Rate meets requirements for high forward and exhaust capacity applications.
- Pneumatic or Mechanical Set Point allows operation from a remote location.

Physical

- Available with Normally Open or Normally Closed Valve Options to meet application requirements.

NOTE:

The information for this catalog sheet is being upgraded to electronic format and will be available soon. Please go to the Information Request section of this web site to order the latest printed revision.
